Received and published: 9 December 2013

We were really glad to hear that both referees found the method proposed in our manuscript interesting and useful for applications in geomorphology. Beyond this, we are also glad that some further colleagues even asked for the source code in order to apply the method to datasets which are not included in our online version.

On behalf of my coauthors I would also like to thank both referees for their large number of constructive suggestions concerning the presentation. Their thorough reviews will surely help us to improve the presentation, and we are already working on the revised version.
