Received and published: 31 May 2014

The paper is well organized and clearly presented. The references are sufficient and include related work and relevant specifications. The research methodology is clear and defensible. Assumptions are stated clearly, the analysis supports the conclusions.

Minor technical changes should be applied:

On page 257, lines 13/14 the publication "Suwandana et al. 2012" is cited. The publication is currently not listed in the references. Please add this publication to the reference section.

In Figure 16, three slope maps are shown. It should be considered to divide this Figure into three single figures to improve readability.

C128

Suggestion for further work: A cutline map delineating the outlines of the identified landform segments (as shown in Figure 10) overlaid over a satellite image or landuse map would be useful to assess possible bias such as sylviculture or similar.
