

Interactive comment on “Ice flow models and glacial erosion over multiple glacial–interglacial cycles” by R. M. Headley and T. A. Ehlers

Anonymous Referee #3

Received and published: 7 July 2014

There might be the odd thing that I would change if I wrote this (choice of refs, use average rather than peak erosion differences to describe the difference between models, more explanation of the mechanics that create the model differences) but these don't add up to a request for revision. The text is well written, easy to follow, copiously cited, and describes a worthwhile investigation that is overdue in being done, and I give the authors credit for making this useful contribution.
