Interactive comment on “A geomorphology based approach for digital elevation model fusion – case study in Danang City, Vietnam” by T. A. Tran et al.

Y. Yamaguchi

yasushi@nagoya-u.jp

Received and published: 12 May 2014

1. General comments The objectives, methodology, results and discussions are clearly stated. In general, this manuscript is well written.
2. Specific comments One problem of this paper is a lack of detailed and quantitative explanation on how to determine the weights for DEM fusion. The authors pointed out this issue on p.272, lines 12-14 as future work. However, as the DEM fusion is the most important part (and originality) of this paper, I would suggest the authors to add explanations how they determined these values.
3. Technical corrections There are some grammatical errors. Below are just some examples. (1)p.259, l.2-3: Version 2 was released → Version 2 released (2)p.259,
