Received and published: 16 June 2015

I think the authors have done a fine job in answering the referee comments, and the text has improved significantly. In particular, I note that the purpose of the study is now better explained; the level of technical details has improved; and new temperature data has been added to aid the discussion of the vertical displacements measured. I think that the study is ready to be published in Esurf, and I thank the referees and the authors for a constructive review process.

Some minor things to edit:

page 7, line 23: “The base station was mounted, always mounted at. . .”
