Dear authors,

In view of the comments posted by the reviewers I would recommend that you provide some minor revisions to your submission. Provide also a clear and detailed rebuttal letter.

The key aspects that need to be attended to in priority are mainly structural:

1- Shorten and streamline the abstract 2- Focus the introduction 3- Separate results from the discussion. That is mandatory if you want a clear demarcation between facts and conjectures. 4- The discussion should include a self-assessment of the added value of this new model and a critical appraisal of the validity of the results with respect

C1

to the model limitations.
