

## **SUPPLEMENT**

Supplement to:

Quik, C. & Wallinga, J. Reconstructing lateral migration rates in meandering systems; a novel Bayesian approach combining OSL dating and historical maps. Submitted to *Earth Surface Dynamics*.

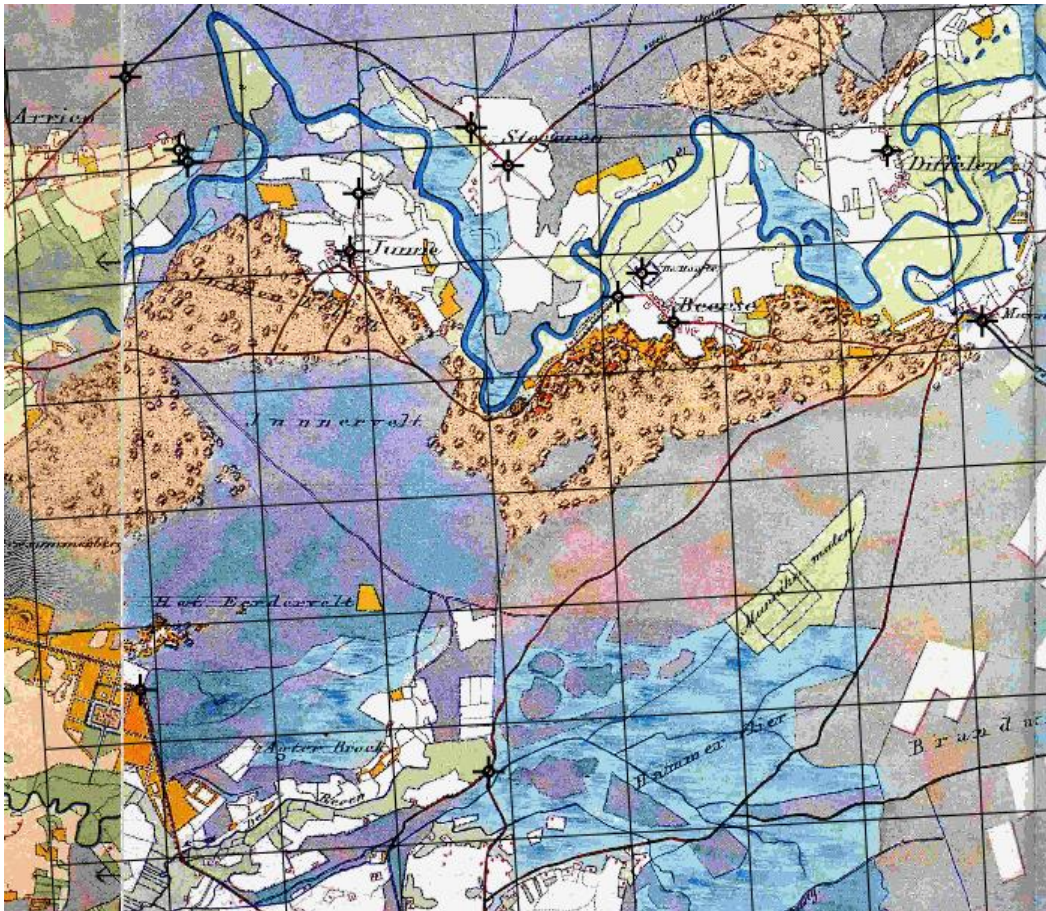

As part of our analysis of historical maps we generated visualisations of geodetic distortions as generated with the freely available MapAnalyst software (Jenny and Hurni, 2011). For methodological details please refer to the manuscript to which this supplement belongs. This supplement contains the distortion grids for all map fragments (figure S1 a-f, starting on the next page).

(a)

(b)

(c)

(d)

**Figure S1.** Fragments of the investigated historical maps displaying the study area, showing ground control points (black or white plusses) and a distortion grid (in black or white, maze size of 1 km). In all cases the grid approaches a perfect grid, indicating that map distortion is minimal. Grids were generated with the MapAnalyst software by Jenny and Hurni (2011).
