**Revision: esurf-2019-21** “Inferring the timing of abandonment of aggraded alluvial surfaces dated with cosmogenic nuclides”

Dear Prof. Mudd,

Thank you very much for provisionally accepting our article, and for your good advice on improving the supplementary information.

We have now added a second file including ‘ReadMe’s and guidance for both the Matlab code and also navigating the Excel spreadsheet (as we think both would be helpful for readers). The figures in our article can be reproduced using either the code or the spreadsheet, and we now explicitly explain how this can be achieved in the supplementary PDF. We also added some additional comments in the code, in line with your suggestions. These are helpful additions and we agree they will make it easier for others to reproduce and work with our findings.

We will be delighted to see this work published in ESurf!

Yours sincerely,

A handwritten signature in black ink that reads 'Mitch D'Arcy'.
