Thank you for taking the time to constructively review our manuscript. We have accommodated your suggestions and it has substantially improved the manuscript.

Other reviewers suggested major revision and following these and including your suggestions we have restructured the paper significantly.

In answer to your comments on the seismological part of the paper we have updated fig 6 (previously fig 5) with spectral plots and more discussion in the text.

For a detailed overview of the changes made and answers to individual questions we refer to the reviewer comments overview document attached here and the updated manuscript we resubmit.

Kind regards on behalf of the authors

Kristian Svennevig
