Interactive comment on "A photogrammetry-based approach for soil bulk density measurements with an emphasis on applications to cosmogenic nuclide analysis" *by* Joel Mohren et al.

Anonymous Referee #1

Dear authors, I consider that the paper is very interesting. The idea of the ms is key to improve the bulk density measurements. I miss in the discussion some mentions to sensors, traditional methods, etc. to compare their results to other ones. Please, see more comments in my attached pdf.
